What makes a music group into a successful band? What makes its style and sound so magical, unique and inimitable that we can recognise it after just a couple of notes?

Instrument technique and individual artistic talent are the fundamental ingredients but they are not enough on their own to play in a group. Because the mystery of a band begins with one basic, fundamental consideration: YOU'RE NOT PLAYING ON YOUR OWN.

If you want to make your passion into your life goal or your profession, if you want to make your group into a unique, inimitable and recognisable band, THE SENSE OF A BAND is what you're looking for. All the secrets, magic and alchemy of a band's dynamics are explained in it. But only if you are ready to put your all into it.

This is a concise and easy-to-use book to help us understand the language of music. It explains its fundamental principles and gives readers the keys to active and intelligent listening. What are rhythm, dynamics, the character of a piece of music, the timbre of an instrument and how can we recognise them in a composition? And the melody, harmony and style of a musical work? What makes Bach's music different from Beethoven's? What are the characteristics of their work and which forms were preferred in their eras? And how has musical language evolved?

Inside Music answers these and many other questions with clear and straightforward explanations supported by a wealth of musical excerpts in order to help you identify the concepts you've learnt in the music itself.

- Both enthusiasts and beginners who want to discover all the secrets of music.
- Those learning a musical instrument who have to take listening and music analysis exams (part of national and international programmes such as the aural tests of the ABRSM exams).

A musical fairy-tale that deals with the theme of ecology, represented by the contrast between music-nature and noise-pollution that acts as a backdrop to the adventures of a little, out-of-tune duckling, the story's protagonist. An original music and environmental education route. A base for performances and school shows, with possibilities to perform the music on the piano or use the play-along tracks available on the accompanying CD.

A fairy-tale about the origins of musical language that involves children of different ages on different levels: an journey in music education that can be used by kindergartens and primary schools as an original play; as a base for performances and school shows - with the possibility to use or perform the music; as an original introduction to musical language as a first encounter with notes, values and harmonies.

For first level, children's orchestras, choirs and performers in primary and 1st grade secondary schools. Score, script, directors' notes, conductor's notes, scenography. CD with the instrumental parts in PDF format.

An exciting journey to the roots of the Blues in the company of an over-a-century-old, African-American pianist who, through the music of his origins, tells us about Africa, slavery in the cotton fields in America and finally, the conquest of freedom. A sonata-blues that gives even the youngest students the opportunity to experiment with the genre of the great bluesmen: the blues of the black heart of America in an accessible, yet complete, version.

Songs which are accessible and fun to perform, bringing young pianists to the world of ragtime and the evocative atmosphere of saloons, cowboys and music of the Old West. A fantasy-history about the legendary Scott Joplin, the greatest pianist of his kind, presented in fairy-tale style and relived through the story of a young boy, whose intense passion for music allows us to rediscover one of the most authentic American music forms.

Four original fairy-tales in which the characters stories are interwoven with the theme music of each story. Simple, yet evocative songs accompany the narrative, leaving space for interpretation. The stories are told with piano accompaniment on the CD.

COSCIENZA DELLA VOCE NELLA SCUOLA ITALIANA DI CANTO
Voice consciousness in the Italian school of singing
The reference manual for the study of singing

Consciousness of the voice is unanimously considered one of the reference teaching manuals for the study of singing.

Rachele Maragliano Mori, author and renowned chamber music singer, analyses the technical problems of the voice as an instrument in the light of scientific and music studies results, beginning with the examination of the fundamental principles of the classical school.

Breathing, emission of breath, pronunciation and articulation, sound quality, register and passages, legato, mezza voce, falsetto, recitative, embellishments and gesture, are just some of the many issues examined via constant reference to the thinking of the great composers (from Caccini and Monteverdi to Rossini, Verdi, Wagner, Schoenberg, Nono, Berio) and teachers (Tosi, Mancini, Garcia, Lamperti, Silva).

The attestations and anecdotes of critics and conductors (such as Mila, D'Amico, Toscanini and Gavazzeni), illustrious singers (like Caruso and Callas), speech therapists (Baglioni, Glover, Tarneaud, Husson) and successful ex-students, make the reading exciting and engaging.

The volume also contains a brief historical overview of the principal singing schools; a series of practical advice for the aspiring singer (when to start studying singing, how to overcome conflicts with their teachers, the necessary qualities to aspire to the profession); finally, a valuable note by Cathy Berberian on the modern voice.

An indispensable aid in the initiation of voice education, *Consciousness of the voice* is also useful for those who wish to discover and enhance their attitude and begin studying singing.

Everybody knows that music is also gesture. It is also easily understandable that an appropriate performance of an orchestra must come from well-chosen gestures. But, since in conductorship there is seemingly no material connection between the gesture of the director and the production of the sound, it can happen that a director who is unable to communicate the most appropriate gesture to obtain the desired sound, has to resort to verbal indications. This makes things more difficult for the orchestral players, who are compelled to expunge and even to go against the gestures of the director in order to obtain the result he wanted to achieve. This causes loss of time during the rehearsals and excessive physical and mental effort for the musicians.

Ilya Musin, probably the greatest teacher of conductorship ever, has analyzed with definitive results the fundamentals of the connection between the gesture of the director and the production of sound from the orchestra.

Ennio Nicotra can be considered his evangelist, and even something more: not only **has he assimilated Musin's teaching**, he has also, thanks to a great didactic vocation, **rationalized it better than anyone else among Musin's students.**

Nicotra's lessons are useful to directors already well-established in their careers who are willing to question their convictions, to aspiring directors, to orchestral players who desire assurance in their profession, to musicians in general and to melomaniacs eager to understand the secrets of this difficult art.

Useful to:

- Students of orchestral conducting; aspiring directors
- Orchestral conductors
- Orchestral players
- Musicians in general

A notebook on piano methodology

Developing the outline of Chopin's piano technique method, the author addresses instrumental technique via the theory that body perception and its harmonization with the mind is a necessary condition for developing piano skills and finding the fluidity needed to play great repertoire. A book in which traditional pianistic methodology is developed with motivated reflections, as well as examples of class work and home study that can be developed and adopted by teachers and students.

This is a fun title for a serious and complete series, full of useful information for someone who plays. The topics covered include:

- the violin: history, naming, character and detailed description;
- the bow and bow hairs: origins, composition, construction, finishing, and restoration;
- hairing bows and its dangers, changing the horsehair, maintenance;
- the strings: interesting facts, how to choose them, stringing and maintaining;
- in the case: a professional's accessories and components;
- maintaining and cleaning the instrument;
- academic and real-intonation tuning;
- suggestions for studying, guidelines for working;

- emergency tricks and solutions, simple remedies to real problems; what you can and should ask violin and bow makers, and many other ideas for studying, unconventional signs in the score, the right clothing for every kind of concert, the musician's style and the right demeanour in public, and what you need to know to practice the profession without surprises, from drafting a CV to managing work: engagements, contracts, payment and insurance.

At the end of the volume you will find a fun (but informative!) appendix.

Written with infectious enthusiasm by an expert in the subject, Antonio Bonacchi, and enriched with a valuable collection of illustrations (350 images) this is an essential book for instrumentalists of all levels (students, professionals, amateurs).
